                                                                                                                                                                                                                                                                                                                                                                               Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated omega-conopeptides, nucleic acid sequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analgesic, anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antlinflammatory, antimigraine, antidabetic, cardiovascular, antipsychotic, anxiolytic and neuroleptic. Tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. Peptides of the invention act by modulating the activity of voltage gated ion channels. They may be used for treating or preventing disorders associated with voltage gated ion channels such as neurological associated with conditions of hypoxia, anoxia, ischaemia, stroke, cerebrovascular accident, brain or spinal chord trauma, drowning, suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. suffocation; inflammation or cardiovascular disorders. They may also be used for treating psychiatric disorders are a psychosis. anxiety or

The activity of the peptides of the invention may be described as, analgesic, canticonvulsant, vasotropic, cardiant, neuroprotective, derebroprotective, cardiovascular, antiinflammatory, antimigraine, antidiabetic, cardiovascular discreters associated with relating to the activity of voltage gated conchannels. They may be used for treating or preventing disorders (associated with conditions of hypoxia, anoxia, ischaemia, stroke, cassociated with conditions of hypoxia, anoxia, ischaemia, stroke, cassociated with conditions of hypoxia, anoxia, ischaemia, stroke, cassociated with accident, brain or spinal chord trauma, drowning, cardiovascular disorders. They may also be used migraine; inflammation or cardiovascular disorders. They may also be used for treating psychiatric disorders e.g. psychosis, anxiety or cassociated and toxicity, and are non-addictive. The sequences given in cardiovascular disorders anxiety or effects and toxicity, and are non-addictive. The sequences given in records. AbB96807-AbB96905 represent omega-conopeptide toxin sequences.
                                                                                                                                                                                                                                                                                                                              밁

                                                                                                                                                                                                                                                                                                                                                                                    anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antiinflammatory, antimigraine, antidiabetic, tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic.

Peptides of the invention act by modulating the activity of voltage gated ion channels. They may be used for treating or preventing disorders associated with voltage gated ion channels such as neurological disorders, e.g. seizure (associated with epilepsy), neurotoxic injury associated with conditions of hypoxia, anoxia, ischaemia, stroke, suffocation, perinatal asphyxia or hypoylycaemic events; pain e.g. suffocation, perinatal asphyxia or hypoylycaemic events; pain e.g. migraine; inflammation or cardiovascular disorders. They may also be used for treating psychiatric disorders e.g. psychosis, anxiety or schizophrenia. The analgesic agents of threating show diminished side afforts and towarders are non-addition who segments after the invention show diminished side afforts and towarders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated omega-conopeptides, nucleic acid sequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analgesic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-257318/30.

Omega-conotoxin GVIB precursor [validated] - cone shell (Conus geographus)

N;Alternate names: shaker peptide GVIB
N;Contains: Omega-conotoxin GVIA; Omega-conotoxin GVIC
C;Species: Conus geographus (geography cone)
C;Date: 25-Feb-1985 #sequence_revision 23-Mar-1995 #text_change 15-Sep-2000
C;Accession: A44006; A6013; B60133; A01785

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Scoring table:
      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     105

-I- TISSUE SPECIFICITY: Expressed by the venom duct.
-I- TISSUE SPECIFICITY: Expressed by the venom duct.
-I- PHARMACEUTICAL: Is under clinical trial by Neurex. It blocks act pain in patients who no longer obtain relief from oplate drugs.
pain in patients who no longer obtain relief from blocking is 100 to 1000 times more potent than morphine. By blocking is 100 to 1000 times more potent than morphine. By blocking calcium channels it disable nerves that transmit pain signals.
-I- SIMPLARITY: BELONGS TO THE O-SUPERFAMILY OF CONOTOXINS. OMEGA-TY

**A new omega-conotoxins act at presynaptic membranes, they bind and block voltage-sensitive calcium channels (VSCC). This toxin and block voltage-sensitive calcium channels (VSCC). This toxin blocks N-type calcium channels, but unexpectedly, does not show blocks N-type calcium channels, but unexpectedly. Causes not show blocking activity at amphibian neuromuscular junction. Causes any blocking activity at amphibian neuromuscular junction. Causes shaking activity at amphibian properties of the state of

                                                                                                         J. Biol. Chem. 275:35335-35344(2000).

1- FUNCTION: Omega-conotoxins act at presynaptic membranes, and block voltage-sensitive calcium channels (VSCC) (By similarity). This toxin blocks N-type calcium channels.

1- SUBCELIULAR LOCATION: Secreted.

1- TISSUE SPECIFICITY: Expressed by the vance Annal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MOD_RES

SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: Expressed by the venom duct.
MISCELLANEOUS: THE SEQUENCE SHOWN IS THAT OF CONOTOXIN:
SIMILARITY: BELONGS TO THE O-SUPERFAMILY OF CONOTOXINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FAMILY

                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                  Score

       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein search, using sw model
